Konrad Kopczynski

AI Transformation Leader · Marketing, Growth & Operations

Kingston, NY · Remote or NYC hybrid · konrad.kopczynski@gmail.com · kopczynski.us · linkedin.com/in/kkopczyn

SUMMARY

I lead AI transformation end to end: I find the work people do by hand, turn it into software and AI systems, and get the organization to adopt it. Fifteen years across marketing analytics, growth and operations: I built and sold a data consultancy, grew Croud's analytics practice into a $9M global P&L while shaping its outcomes-based measurement approach, and most recently founded Titan, an AI operating system for multi-location service businesses, now licensed across a 120+ location franchise network. I build the systems myself, running teams of AI agents with automated review and testing, and I'm strongest where AI transformation usually fails: making the idea clear enough that people act on it.

2×	**50%→30%**	**120+**	**$9M**
revenue per employee at Croud in 12 months	field labor as a share of revenue with Titan	locations licensing Titan	global analytics P&L; US grew 650%

EXPERIENCE

Founder · Titan — 2026 – Present

AI operating system for multi-location service businesses, proven in home-services franchise locations I co-owned.

- Built **Titan** to modernize an industry run on legacy tools: reporting, quoting, invoicing, collections, recruiting and dispatch in one AI-run system; **licensed by a national franchise group and live across 120+ locations**.
- In the proving-ground locations, cut field labor from **50% to 30% of revenue**; cut cost per hire from ~$1,000 to **$100–150** with an AI agent that screens applicants by text; collected nearly 100% of invoices and recovered ~$20K of bad debt.
- Designed decision-first reporting (daily dashboard and twice-daily email) around what owners act on: what to invoice, what to chase, where to send an open crew.
- Replaced a ~7-person engineering team with one operator running **80+ AI coding agents in parallel**: every plan and change goes through multi-step adversarial AI review (safety, architecture, test coverage, and a reviewer trained on my own review history), 21 automated checks, per-change preview environments, a merge queue and self-rolling-back deploys. **975 changes shipped.**
- Built self-healing loops: nightly data reconciliation, error scans and team feedback flow back into plans; designed a CEO agent to orchestrate workstreams and remove the human bottleneck.

VP, Data & Intelligence · Croud (global performance-marketing agency) — 2024 – 2026

- **Doubled revenue per employee in 12 months** and cut 15% of employee cost by replacing manual delivery with software products.
- Saved **$900K** on one client with a campaign taxonomy builder prototyped, built and rolled out in 12 months; set up **$5M in annualized savings** by productizing it as a self-serve tool in CroudOS.
- Conceived and drove adoption of "Brilliant Basics": marketing readiness audit, martech roadmap, first-party data ingestion, taxonomy, standard media performance dashboards and **LLM-driven weekly reporting**, scoped into every new client.
- Set the roadmap to automate it: prototype by hand, prove with contractors, then build software. Moved reporting and tag management from full-time staff to a contractor-and-software model.

VP, Strategic Analytics · Croud 2021 – 2024

- Grew the **US Analytics P&L 650% to $5M in two years**; unified four US and UK teams into a **$9M global P&L**, ~15% of global revenue.
- Took the C-suite strategy engagements sold by Chief Strategy Officer **Avinash Kaushik** and made them repeatable and deliverable worldwide: **$7M+ in revenue**.
- Built the outcomes-based modeling that was a major part of winning Croud's two largest media clients (**$100M combined spend**).
- Designed and got Croud to adopt its Strategic Analytics framework (below); sold analytics into 100% of the top 15 global clients through a cross-sell process and tool; grew new-client revenue 150% with standard scopes.
- Argued in a January 2023 memo that AI would commoditize agency services and that Croud should price on outcomes and use AI to cut staffed hours; then led that shift as VP, Data & Intelligence.

Founder & Managing Partner · impakt Advisors (acquired by Croud) 2016 – 2021

- Grew an analytics consultancy from $0 to $700K revenue with a remote global team of 11; **sold to Croud for 3× revenue**.
- Clients: Dell EMC, AB InBev (ZX Ventures), Indigo Ag, Public Goods and a $200M SaaS company. Customer-profitability audits lifted client profitability an average of **30% in 12 months**.
- Turned the firm around by repricing on value: cash-flow positive at 25–35% margins; employee NPS 80+ through Covid.

Analyst → Director · Fitzgerald Analytics 2011 – 2016

- Led a team of 14 on "Data to Dollars" engagements for TD Ameritrade, Bridgestone Firestone, CFNA and Delos; client profit gains of **$150M**.
- Grew a retail-finance division from $25M to $125M by optimizing customer lifetime value; lifted TD Ameritrade key-moment conversion **130%**; built marketing-ROI metrics for an investment advisory firm.
- Raised team utilization from 64% to 82% with a new operating model; grew the Analytics & Data in Financial Services Meetup to 2,000+ members; spoke at Enterprise Data World and Gilbane.

Earlier ventures · Sebastian Ward (DTC apparel), Evolution 2 (habit app), Amelion 2009 – 2018

- Sebastian Ward: #1 Google ranking for 3 target terms and 25K new visitors via SEO; +150% conversion through A/B testing; referral program lifted customer value 20%.
- Evolution 2: grew to an 11% visitor-to-user conversion at $0 acquisition cost with 40% 90-day retention.

MARKETING & GROWTH EXPERTISE

Full-funnel growth prioritization. Awareness, consideration, intent and conversion data to find where a brand's growth actually is, with expected outcomes stated up front.

Continuous optimization. Value-based bidding, propensity modeling and run / fix / kill logic for creative and ad groups.

Outcome-driven planning. Plan for frequency, conversion and brand lift, not just reach; price and staff against client outcomes.

Measurement. Custom multi-touch attribution, predictive ML attribution, brand-lift and incrementality testing; marketing ROI and customer lifetime value.

SKILLS

AI & software: AI transformation strategy, agentic software development and multi-agent orchestration (Claude Code), LLM workflows, AI evaluation and review pipelines, automation. **Data:** SQL, Python, BigQuery, Postgres, data architecture, dashboards and decision design. **Marketing:** performance marketing, martech, first-party data, attribution, MMM, experimentation. **Leadership:** P&L ownership, operating models, change management, career frameworks, remote global teams. **Languages:** English, Polish (fluent).

Platforms: Tableau, Power BI, Looker, Snowflake, BigQuery, AWS, Google Cloud, Azure, SAP, dbt, Fivetran, Airflow, Alteryx, Amplitude, Mixpanel, Segment, Optimizely, Salesforce (Marketing Cloud, Datorama, Agentforce), HubSpot, GA4, Google Marketing Platform, Google Ads, Meta Ads, Claude and OpenAI APIs, Vertex AI, Claude Code, MCP.
